

# A SUMMARY OF THE SYSTEM OF QUADRALITY

An excerpt from

Unlocking the Secret to the Riddle of the Ages

***The System of Quadrality is the underlying Spiritual Laws, Rules and Structure whereby the Four Fundamental Frequencies of Universal Oscillation manifest through the Theory of Harmonic Creation as the Four Pathways to Light and Truth.***

*Author's Note: This formal definition for the System of Quadrality was presented on p. 8 of the First Print Edition of my work, a 700 page discourse on and detailing of the process from which it came into being. Clarification on core principles – as well as new insights my further adventures into this subject had afforded me – were included as a series of 26 essays in the Fourth Digital Edition. This excerpt is from the end of the last of these, "The Theory of Everything." The section, intended as a review prior to my final statement in that regard, is an effective exegesis on its own merits. In reproducing it I've retained all references to other portions of the digital edition in addition to certain key aspects of the System of Quadrality, which I felt were unnecessary to restate in this review. I hoped they'd serve in establishing continuity in the principles discussed and their derivation.*

Over the years I've had plenty ideas, but none I'd consider universal in scope. And about seven years ago I had one that seemed fairly simple. I've mentioned much of this before, but it is worth a review as our time together nears completion. For the five years prior I'd been reading modern philosophy as it had found its way into the self-help movement. It became clear to me that many of the principles discussed had roots in ancient spiritual traditions. Yet, what I found even more striking was the parallel evident between them all and some basic scientific precepts. And later I learned I'd not been the first to notice one existed. But around 1998 this other idea came to me as these early intuitions began to gel. Now, as to its originality I can't rightly say, only to that of the system to which it led me. Nevertheless, the idea itself was rather basic. Being that we live in one world where Religion and Science coexist, even though they uphold different laws there'd still be one truth to which both were beholden. And since the world this one truth was manifesting in was physical, as my scientific training had shown there had to be a way to model it. Throughout history, others have tried to provide a view of the entire *Big Picture*, but no matter how good a particular view may have been it was still limited by the perspective of the viewer; and by this I don't mean the visual perspective but the mental. Our beliefs are like an artist's colors. Each artist begins to paint with a preexisting set, which then becomes a permanent part of their picture. Today, though efforts are admittedly improving as both Extremes seek to move toward a Means position, the analogy still applies. Theologians with a background in Science and who have come to embrace the truth in its discoveries see the results as reinforcing their position. And the scientists whose discoveries increasingly seem to acknowledge the realm beyond the tangible and the profound order it made possible still demand the tangible equation to explain it.

I knew that the only way to find the truth I'd been looking for was to search in a place that embraced the generalities in them all and yet transcended the specifics of any. And I realized I would have to release my preconceptions about what I was going to find, and any attachment to the correctness of conclusions I might draw in the process. While I could look within Religion and Science for clues to the truth I hoped to model, I needed a new paradigm for the model itself and found the key to it in the universal forms of expression for the energy common to both. My rationale was this. Ever since the appearance on Earth of self-aware beings, the ability existed to perceive a thought or to process an experience. The development of language then grew out of the desire or need to convey one's thought or experience to another. Begun simply as grunts and gestures, it evolved into multitudes of complex languages all suited to transfer this information. Though languages are spoken or written, differences are more evident in the latter. But while the languages themselves are as unique as the cultures that gave them life, there is an underlying truth common to all. Regardless of whether you consider the characters in Eastern languages, the words in Western languages, or any of the signs, symbols, or alphabet configurations ever used since the first, they are all depicting common thoughts and experiences. If you take an English word such as love, no matter the character or word another language uses it is still describing the thought or experience of love. The commonality, then, is in the energy represented by the word, not in the specific word chosen to represent it. And regardless of how love is understood in that culture, the energy it then represents and any words and energies it would be compared against are all within that culture's frame of reference – and thus relational to those words in other frames of reference. And so, the words and characters of all languages embody the energy of common thoughts and experiences, and are the forms whereby their information is conveyed.

This provided the first premise I used to develop my model. Words are the vessels of information and energy for common thoughts and experiences, language-relative to the absolute information or energy they are upholding. Any relationship established between other vessels in the same frame of reference thus reflects an absolute relationship – a specific physical representation of a general spiritual truth.

The second premise I used for it came from my study of the variations of Religion and Science. All information and energy exists as a range of values that can be described through the comparison of opposites. And one of those pairings, Intangible and Tangible – understood in some manner by both Religion and Science – mandate two essential divisions within the entire range, which I chose to call Spiritual and Physical. Word and Deed, Energy and Matter, were simply two ranges of spiritual to physical energetic values within a single energy system. Plus, the comparison of opposites was a device for the conveying of information in all languages. Everyone just naturally finds it easier to have an understanding about something by comparing it to something else. It is how we make choices. And if you take the time to listen or look, you'll be amazed by how often they come up in everyday speech or writing, or in the various types of audio-visual media. You can start with my last sentence!

This led to my third premise. If all words embody energy, and all languages use words in balanced opposition to convey information, a system for energetic truth can be devised based solely on these oppositional word-pairings and the rules used to combine them. It wouldn't matter what words or symbols in a language upheld the *energetic truth* of Love to Hate or any range of values. The rules for their evolving into *states* and *conditions*, and the structures thus formed, would be the same.

The final premise then naturally fell into place. Any such system would have to occur at an evolutionary level beyond the 2<sup>nd</sup> – *Duality*. In my studies I found many practical reasons for this. No multidimensional structure could be formed otherwise; yet even in a 1-D equation, evolution of a range of values requires a way to express Means within Extremes. *Triunity* can do so, but for theoretical reasons it lacks the needed ability to accommodate both the separation and the interaction of that range.

The evolutionary level that could satisfy all these requirements was the 4<sup>th</sup> – *Quadrality*. And when I started to explore it as a system, I found how all cultures – and the religions and sciences within them – had an awareness of energy existing as a range of values with four divisions. The very first step I then completed was the archetype for this energetic realization – the *Four Pathways to Light and Truth*. Built upon core teachings from the realms of Religion and Science, it held that all paths born from Light and Truth energetically reflected in themselves all others. My quest for the *Rules* and *Structure* of existence soon led to the *Quadralitic Cube*, which I saw was the paradigm for the long-sought-after *Blueprint for Creation*. Using as my roadmap the ***Izunome Cross*** – sacred symbol for the Age of Light designed by Mokichi Okada – I called it ***The Totality Of God*** because the God it sought to represent could have no exclusions. But for *Quadrality* to be considered its *governing system*, it would have to be so powerfully evident in creation as to clearly preexist the event, and it would have to model all existence – inorganic and organic. The ability to model the periodic motion of energy for light, sound and heat would clearly establish the *Quadralitic Cube* as the paradigm for the Universe in all its inorganic glory. But only by also being able to model organic creation would it be truly unifying. And the very same symbolic *Cube* did just that when we discovered how it embodied the genetic structure of DNA. This meant that not only was the Universe designed in advance, but anything that having DNA would define as living – or organic – within it.

The odds for DNA are astronomical. Its existence is part of the mystery of material evolution still needing a solution. But realize, DNA didn't have to be created from scratch on this planet. If not DNA itself, necessary ingredients for life could have been delivered early on by comets and meteorites landing here, which, as scientists know, contain at least some of DNA's building blocks. Yet, nothing began here. They claim it all goes back to the Big Bang. The perhaps unanswerable question is how the first DNA was formed. Still, since it is programmed into existence in the *Quadralitic Cube*, it was destined to occur. This gives us a sense of what I meant on p. 268 by the Hand of God influencing the timing; God's *Second Law of Being, Order*, made it so when the time was right. It also sheds light on *Dynamic Stability*. From Zero Moment structure was designed and rules were established for things to work. This began with the particle selection that allowed Order to come from Chaos in multidimensionality.

Now, as wonderful as arriving at the *Rules of Quadrality* and the *Structure of the Quadralitic Cube* may have seemed to me, they didn't supply the few simple and absolutely universal principles Steven Weinberg says are urgently needed, only the mechanics whereby they operate. But indeed, that was my original quest, which I felt had ended successfully; and it was done long before I knew of Professor Weinberg's comments or the program I've been referencing. This book started as an effort to document my approach and to support the validity of its findings. Still, in that process the answer to his request had been revealed. By basing the *System of Quadrality* on balanced word-energies, I had actually keyed into a set of underlying truths – begun in the Spiritual Realm as principles and laws and then applied in the Physical Realm through its myriad theorems and formulas. And in this closing essay they deserve a restatement. The initial two are based on established Eastern teachings as taught by Mr. Okada, which give life to the Spiritual Realm and are intrinsic to every duality I have throughout my work examined. First comes the *Principle of Balance*, and all balanced word-pairings uphold it by definition. It is the truth that "all *states of being* manifest from the primal dualities of Spiritual/Physical and Positive/Negative. The *being* of any state requires that within the range of values of its creating duality another state must uphold in energetic opposition the same qualitative sense or quantitative degree as itself." Second is the *Law of Order*, and again, every duality reflects it simply because either term can be placed first and thus best serve a spiritual or physical purpose. It is the truth that "*states of being* occur as a series of transforming events for which there are spiritually and physically correct orders – with the spiritual setting the precedent for and having preference over the physical."

But as noted before, to progress any further in my quest required moving to the next evolutionary level – *Quadrality*. And it was only by doing so I was then able to arrive at two additional truths, these giving life to the Physical Realm. The first is the *Principle of Harmonic Alignment*, which acknowledges the harmonic and frequency natures of words in any dualistic balance and how those values will then affect and be affected by any evolutionary combination as well as by their relationship to other balances and combinations. *Harmonic Alignment* is the truth that "every *state of being* is a unique combination of harmonically structured energetic vibrations born from *four fundamental frequencies of universal oscillation*. These harmonic vibrations provide any state with the knowledge and means required to align with or disengage from another state for the greatest good of the Individual states involved as well as the Collective state they are within." Therein lies the mechanics whereby a cause can produce an effect, an action a result. And its four frequencies on Earth resonate in a clear sonic connection between the bases of DNA and the Great Pyramid of Giza!

The *Principle of Harmonic Alignment* is original as I offered it, but its truth has roots in Hermetic traditions, which I explained on p. 550. (That can likewise be said for *Balance* and *Order*.) But the second of the Physical Realm truths I had discovered is also original to me in its root. It is based on a key word-balance we've discussed – Nonchange and Change – born in one of the world's most ancient and respected philosophies. But while the balance itself was long-held, philosophers since had failed to consider at least one vital scientific implication. I call this truth the *Law of Dynamic Stability*. Explicitly it is "the constancy of character or purpose with respect to the non-changing frame of reference must be maintained in any changing system to prevent *discord* or *disorder* from ruling that system. To do so, there is an ability for finite-relative systems to become open to the infinite-absolute such that adjustments can be made as needed to maintain *harmony* and *symmetry* in the *Big Picture*." Simply put, it is the understanding that all change occurs in the context of the non-changing frame of reference, and that for stability to be ultimately upheld in the whole of change, the parts must have access to the non-changing resources. It's the reason Order came from Chaos at the Big Bang, and why Order has been maintained as the ruling principle ever since.

Upon proposing it I realized it would force the scientific community to rethink its laws of conservation and how they would then apply to the Universe as a *Big Picture*. Key to it is Nonchange and Change, the duality of creation, the *Driving Force* for the balance that accounts for the Universe we see today – All from Nothing. And we know the appearance of All defies the laws of conservation. Still, a realization to which empirical evidence is pointing and causing a reevaluation of scientific truths – the notion of Supersymmetry – is itself mandating the possibility. Essential to string theory, Supersymmetry is its acknowledgment of the *Principle of Balance* – that there is a sister particle to balance every particle. And it claims that the creation event broke the symmetry of no-space and no-time by its spatial point and temporal moment. The laws of conservation can't explain All coming from Nothing. Only the *Law of Dynamic Stability* can, as well as how that and all future events would insure the Universe's existence. No sub-quantum particles and forces could be proposed by today's physicists if there hadn't at that event been a *Law* to allow for them.

To these Spiritual truths I then added a Physical – the *Law of Universal Use*. "The Universe, and all within it, has the means and ability to learn, access and use what it needs, where and when it needs it, and exactly how it needs it to *exist* in accordance with the Spiritual Laws. All these processes involve choices made under the guidance of the Wisdom the other Laws provide." None of the Spiritual truths would matter if the Universe for its greatest good didn't have the physical wherewithal to apply them. Collectively, they are the *Five Laws of Being and Existence*. And in arriving at them I became aware of the truth that joined them to the *Rules* and *Structure* I had already established as underlying all energetic *content* and *activity*. That is the *Principle of Behavioral Reversal*, "the understanding that the energy specified by the range of values in an ideological duality has the ability to realign such that its passive value can become active to satisfy a behavioral condition." Once more it is a truth buried within ancient traditions, but one so hidden that none before had formally considered its presence, let alone its practical application. Now, in a sense you can think of it as the second physical law of existence, following *Universal Use*. But from the above you should see why it wasn't included with the others. It is a necessary ingredient in the *Five Laws* and thus not separate from them except in its purpose – to provide the *modus operandi* whereby they function in space and time.

A great deal is made today by proponents of *Intelligent Design* about the odds for any of the myriad requirements for tangibility or for life that would have to fall into place in exactly the right way and at the right time. And when you combine them, you realize the odds say we shouldn't even be here. The only way they see it occurring is by imagining some external and omnipotent entity has His Hand at all times in the daily workings of all aspects of creation, almost like a cosmic chess player moving infinite pieces on a chess board throughout all space and for all time. Then, He'd be checking out the cosmic *Big Picture*, arranging and manipulating things until finally the planet He had chosen to put life on was ready. And, whenever the mood struck Him He'd form another life. "This looks like a good day to create a tadpole," He'd say; and with a snap of His fingers a tadpole would appear. "Mighty fine time for a dinosaur." Another snap and there's Tyrannosaurus Rex. "Be nice to have some life forms I can talk with, but I'd better get rid of those dinosaurs first!" Snap! Snap!

I've deliberately made these last few remarks appear rather ridiculous, because to many of those against it that is what the case for *Intelligent Design* actually seems. The human ego has a difficult time accepting this due to our own place at the top of the evolutionary scale of consciousness on this planet. But to affirm a level of free will and inherent ability to actualize it as *ID* attributes to God, would make our own little wills and abilities frighteningly insignificant and inadequate in comparison. All the wills on this planet couldn't on their own stop an asteroid from striking us if we were in its path (at least not at Humanity's present level of ability to access the power of the will to effect such an outcome). And unless Divine intervention did occur, where then would be the will of God – or the ability – to stop it?

The answer lies in finding the balance. This is first in not seeing ourselves as insignificant but as truly important in the *Big Picture*, in the same sense as the tiniest gear is important to keep even the largest clock ticking, and second, in then realizing that all this was not done just for our benefit alone. From Zero Moment, all that was needed would form from *Light* and *Truth*, but not just for Humanity, for everything! A point those who use scientific odds to make a case in favor of *ID* is the limited window of opportunity in the entire history of the Universe for a planet that can support life to exist. But one of the things observers on Earth often lose sight of in looking through telescopes is the passage of time. As noted on p. 463, were an observer to be looking back toward us today from a region of space where we see only the Cosmic Microwave Background Radiation, they'd see only the CMBR, too. The entire vast Universe is right now within the same window of opportunity for life, give or take perhaps a few billion years. And other scientific points said to uphold *Intelligent Design* as a form of the *anthropic principle* can be in a like manner argued. These include our atmosphere, moon, sun, planet distribution, rotational periods, water content, tectonic activity, and so on. But is the Earth and us really special? God loves all His creations. If we can acknowledge the astronomical odds of our existence – being so high as to make us seem impossible – and then claim a case for Divine intervention, why limit God's ability to do elsewhere what we insist He could do here? We'd be limiting ourselves, as I've said several times before, to finite thinking. My personal feeling is the design is such that the odds are much lower than we think. The Universe is chock full of life, which has a commonality in its basic elemental and genetic constituents, and also expresses the incredible range of energetic values from consciousness to awareness as on this planet – and maybe even further. But there'd be no need to duplicate specifics. Imagine. Every creation gives glory to its creator. Look at all the various inorganic creations, macrocosmic and microcosmic, each in its

own way doing that throughout the Universe. And organically, this planet alone has had many tens of thousands species on it. But imagine all the creations God could have glorifying Him if there were that many different species on another planet, and that many different again on another, and so on. In addition, the Universe may be within its window of opportunity for life as we know it, but who's to say what new life forms are waiting in the wings. On p. 422 I mentioned how I felt the Universe would never die. But it certainly would evolve, and it wouldn't always have to be as it is. Moreover, evolution doesn't only occur within our bottom tip of the inverted dimensional pyramid. And as also proposed in the main text, Humanity, and all life on this planet, may be poised for its next evolutionary leap.

So, when I first brought up the *anthropic principle* I acknowledged that you could consider me as among those who support it. But I can't rightly say if my vision conforms to any present version of it, even if from my previous comments you might think I support its extreme form. Quite the contrary. As in all things, Extremes and Means are both important. The Extremes set the range of the plan, and the Means then uphold the knowing it all works together to fulfil it. The design was whatever that required, extant in the infinite spatial dimensions and temporal frames of the cyclic event-line before the Planck length and time established the linear event-line. And essential to the design were the *Laws of Being and Existence* I've expounded, which would guarantee success over failure, with everything playing out as needed to unify spiritual and physical truth. Intervention then comes not in the manipulation of events by whim, but in the caring and loving participation with these *Laws*. And along with God's guiding principles were the *Rules of Engagement* and the *Structure of the Content and Activity* through which it would occur. Whatever states or conditions would then exist did so by evolving through a single formula in accord with a unifying theory – *Harmonic Creation* – first defined on p. 399. *The existence and evolution of the Universe and all within it can be understood in terms of the principles underlying the creation of harmonics, the perfected merging of Music and Mathematics – the spiritual and physical reflections of the same Truth within the Movement.* And it was during the recently-recalled resonant analysis of DNA and the Giza Pyramid that we saw just how musical the Universe is, both in its beauty and its precision. Then, Music truly represents the Universe's Soul and Heart, Mathematics, its Mind and Body.

But if we accept the preexisting plan and the design whereby it is carried out, does that mean God's role is just to get things started, and we insignificant beings are indeed left to fend for ourselves? Absolutely not! And *Dynamic Stability* applies to us as much as any of God's creations. In fact, the more highly evolved the will – and thus the higher the manifestation of Soul – the greater the ability to use the *Laws of Being and Existence* for the greatest good. But also is the possibility greater through choice to thwart it. This understanding then frees God from having to intervene in every affair, or from appearing uncaring or impotent when failing to do so. The *Laws*, once put into place, were designed to work everywhere and for all time, and they only exist because the Creator of the Universe cared that much about His creations.

It's important to remember that any talk of mechanics – a physical plan for the Universe's creation and a design whereby it continues to work – is still overlooking its Soul and Heart aspects: its Music, the *desire* and *passion* of Infinite Consciousness. From the perspective of its Mathematics, the *attitude* and *effort* of Infinite Awareness, God must certainly allow for both sides of the balance of Chaos and Order – to let things go awry but then provide for the energy to correct them. In this is found the creation of thought and experience. But in the creation of will and love is found the

provision for orchestration according to a *Divine Plan and Design*, with Souls born that can then work together to fulfil it; and, regardless of whether they are born from the Intangible Soul of Good or Evil, all serve it. This is in accord with *Dynamic Stability*, which calls forth from *the Infinite Source* whatever is needed to restore balance – be it Energy or Soul. For colliding solar systems it is the former. But when Collective Soul on Earth is out of alignment with the greatest good of Cosmic Soul, individual souls are beckoned so as to bring attention to the need to restore balance. We may call the individuals involved or their resulting actions evil, and perhaps even under the influence of or directed by evil forces or entities; but as far as God and the Universe are concerned, whatever can accomplish *Dynamic Stability* is good!

In this last paragraph it might seem liked I dropped a bomb just as we were arriving at an understanding of the role God has as upholder of the point of balance between observer and participant as far as the affairs of the Universe and all within it are concerned. Now I write that there is such a thing as Intangible Evil from which Souls were manifest for a purpose – along with Souls from Intangible Good – each to fulfill alone or with others a *Divine Plan and Design*, and that all this was orchestrated. Wouldn't that be intervention? In a sense it is, but intervention is a dynamic concept that changes as much as anything else changes in the Realm of Change. For the God that is the Realm of Nonchange, intervention is only the ability to participate through His own *Laws*. But there is so much more to this Universe than the flesh and bone of our 4-D tangibility. We cannot imagine all that exists or is possible in the infinite domains beyond us. Moreover, it's one thing to talk about the physical evolution of forces and particles in multidimensionality and how *Dynamic Stability* can restore harmony and symmetry solely in the context of energy however it may exist in each domain. And we've learned how part of that process involves the ability for energy to make the transition between domains. But the spiritual evolution of Soul and Heart is quite another matter, though it equally mandates the ability to make the transition. However, this is now occurring not as the unending flow of energy without limit, but as the eternity of incalculable Souls beyond death.

Scientists have a hard enough time acknowledging Soul in the dimensions we live in, so, to discuss it as an afterlife experience in multidimensionality may be more than any can venture. But I've devoted nearly 1000 pages to exploring how energy exists as an infinite range of values, and for spiritual harmonics and frequencies as well as physical. There is no way I can stop doing that now simply because it may cause some individuals discomfort. Of course I don't include you, my valued reader, in that group. After all, you've made it this far, and whether you lean more toward Science or Religion you've come to realize that in any domain there are aspects contributed from either camp. I needed to say this before I continued, to make sure you'd be in my corner as I set the stage for the inevitable realization that follows. In the Realm of Change, God evolves too! And through this, so does His connection to any intention or action one may construe as intervention.

The highest energy in God's infinite range of values is Soul. You may recall that as being the *Spiritual Alignment* for the highest energetic range in the *Four Pathways to Light and Truth*, p. 33. The *Sceptre* in charge of that path is Wisdom, and its *Spiritual Guide* is Will. Think what this means in our present discussion. Atomically, we are all part of the Big Bang, its parts adding up to the whole. But even the Big Bang had to have a *Source* – which I've called God. And all that comes from God is a part of God. That means you, me, this planet – everything in the Universe. But since God is Nonchange, the creation of God's parts doesn't diminish the whole of God.

Now, everything I've talked about as being God in Nonchange, from which all Change comes, in within Wisdom. Wisdom is the energy from which everything is created, and Wisdom is the consciousness that formulates *the Plan*. Its *Spiritual Cornerstone* is Truth, and from it come the *Laws* and the *Rules*. All this is guided by Will, but it takes place because of Desire, its *Physical Cornerstone*, driven by the force of Self-expression! In this, the *principle of mission* is born, and everything then created carries a piece of that mission – to fulfill God's desire for self-expression and to do so wisely for the greatest good of all. For a star in the inorganic world of Mind and Body, its physical mission is simply to be the best star it can be. But for any creation in the organic world of Soul and Heart, its spiritual mission is to become an active participant in formulation and fulfillment to the extent its Soul will allow. It is why chance and free will must be separately acknowledged and accommodated. Then, Souls are born to serve in various capacities, with each chosen for the physical realm required to complete its range of values with a brief turn in a temporal existence. Yet, the Soul's mission does not end there but continues upon return to the realm from which it was born, to reside in and function for all eternity at the level for which it was intended. In that, we must admit each level contains the balance of Good and Evil. But I will not debate what places a Soul on one side or the other upon arrival, only affirm that such a process happens. And for this to occur on the lowest level it had to start at the top. Recall what happens as the Essence of God evolves to Personality – the Unity that always was and still remains becomes for all eternity the Four Spiritual Beings I've referred to as the *Holy Quadrality*. Their missions, too, required a physical form for a short time. And though you may shudder when I say this, that means there's also an *Unholy Quadrality*! (Who they might be I won't even try to guess.)

In proposing the *Holy Quadrality* I know I've created as much a problem for many in the religious community as I have with *Dynamic Stability* for scientists and their laws of conservation. But as I said before about Soul and its range of values, there's no way I can stop upholding how that applies now simply because it may make some people uncomfortable. I still hope I don't have to include you among them. But if I do, please try to consider that this doesn't diminish the truth you adhere to. My proposal only affirms the four fundamental ways to see Truth and the individuals who've helped us to do so. Given that, I make no claim as to how far within or how high between the domains their presence and influence extends, only that they do. And I also won't speculate on how this might play out on another planet with sentient beings, only that it must. But there is a hierarchy in this context that extends throughout all the domains born from God and in which the Wisdom and Will of God can formulate a *Plan* and set about fulfilling it through His myriad Soul manifestations. Everything must occur under the guidance of the *Laws of Being and Existence*, and function in accordance with the *Rules and Structure of Quadrality*. Then, once we have embraced this realization, the three missions discussed in *A Soul's Journey* – divine, incarnate and societal – become players in *God's Plan* at whatever dimensional level their Soul is within.

No longer does it seem like a bomb had been earlier dropped. Everything I then wrote was there to shed as best as I could a little extra light on *God's Plan*. Once clear, karmic consequence makes sense as the spiritual enforcing of cause and effect. But intervention through prayer also makes sense, to invoke the help God has made possible through *Dynamic Stability*. Defining the greatest good as that which upholds the *Big Picture* absolves God from having to answer our prayers as we may wish. But beginning with His own highest manifestations, and extending to His agents and

workers, angels and saints, are all those members of *the G.O.D. Team* rooting for our success and supplying us with His resources.

Of course, both sides of this spiritual coin exist, with the other as the opposite to the above – demons and sinners – the *Bearers of Darkness* in the eternal battle for Collective Soul with the *Messengers of Light*. After all, the *Unholy Quadrality* would have their own legion of negative entities to do their bidding. And it is within Infinite Will where the division between Good and Evil occurs. Evil is the necessary balance to Good for the *Principle of Balance*, but only in potential must Evil exist to satisfy it. Evil then is God's strength training for our Soul, an opportunity for growth on its return journey. Evil is an option provided to the will, which it can then refuse. And this is true regardless of the side of the balance from which a Soul is invoked. Hitler could have said no, as could any with a propensity for it as part of their Soul's mission. In contrast, even Jesus was tempted by Satan, though He turned the offer down. How many times have any of us done otherwise! But have you ever stopped to consider that there might be some unseen force or entity that, as I proposed earlier, in your moment of weakness may have helped you to take the unwise option. And to again acknowledge the other side of the coin, I dare say the opposite force or entity has often had a part in staying the hand of evil before it struck.

Though you might think this detour to a discussion of Soul has been contrary to our original purpose, it will actually have sharpened our focus as we return to it. On our journey through these essays we have been able to resolve perhaps the most serious conflict between the East and West on the Spiritual level – that between Soul reincarnation and final destination. We learned that given the right model, one based on the nature of energy, both would exist and in fact were needed to accomplish specific spiritual purposes. We can similarly now resolve our present pressing conflict between Science and Religion on the physical level – that between a Universe with no beginning and one with a creation event. Aside from scientific conditions apparently contradictory, the conflict comes in realizing the latter would imply a Creator; so, the scientific answer to the Universe's origin would determine whether or not a God was required in its scenario. Once more we have learned that given the right model, one based on the nature of energy, both would exist and in fact were needed for specific physical purposes. Scientifically speaking, the linear event-line required a creation event – the manifestation of 4-D space-time. But that event-line itself contains a brief initiating period that defies the laws of the space it's creating. It is in looking at *the Source*, the cyclic event-line, where the Universe without a beginning as we understand it is found – the space-time of infinite multidimensionality.

And in that infinitesimal linear moment is an infinite cyclic moment from which a series of dimensional Universes are born, these taking the Universe as *a totality* closer to the 4-D creation event. The dance of forces and particles extant in each has worked itself out to make the final Physical Universe possible, as has the evolution of Soul to make its related Spiritual Universe possible. After all, the need to finish the evolution of a complete range of values, and all the existences possible within it, occurred for the physical evolution of Energy and the spiritual evolution of Soul.

If you put this in the context of the *Triunity of Tangible Creation*, the pre-Planck multidimensional Universe was working through light, sound and heat as they exist symbolically in the *Quadralitic Cube* – their potential wavelengths, frequencies, and wave and spiral motions. And the *Cube* itself is admittedly a limited 3-D reflection for all that transpires beyond it. So, I could only speculate on how they might exist there as anything resembling the visual, audio and thermal phenomena we're familiar with.

Heat in that sense is said to only have come into being once the 3-D spatial boundary was broken by the point source. Yet, what we see from the perspective of the linear event-line as the sudden eruption of space-time at the Big Bang is actually occurring over an eternity from the cyclic event-line. And as a result, the existence of God can't be determined by whether or not there is a creation event. It's impossible to separate the linear Big Bang from the cyclic. The only way to arrive at proof of God's existence is as we have done – in the model that integrates the cyclic and linear event-lines of creation. Once the model for anything is established, the model maker as I'll soon show is affirmed. For the Universe it is *the Source*, which in those event-lines resides at the intersection of Zero and Infinity, Nothing and All!

As Science comes closer in the indeterminism of quantum probability to seeing how something can seem to come from nothing, what it is really looking at is the connection of our 4-D space-time to the reality of multidimensional space-time. Multidimensionality provides us with the opportunity for the realization of "other universes," each within its particular time-frame and range of dimensions. Each transition is another evolutionary leap. And we can see from our 3-D spatial world just how much diversity is possible when you consider at any given place the coexistence of Spiritual and Physical Realms. Moreover, once we no longer think of God as limited by the time of the linear event-line, we allow for the probability of microcosmic existence – *Quantum Theory* – as well as the determinism of macrocosmic existence – *Relativity*. It also allows for the chance of indeterminate inorganic action and the free will of determinate organic action. Both of those occur in the linear event-line but are already written in the cyclic event-line.

In our unification of Religion and Science, it's clear a new vision for what and who God is must be made (a point also cited on *Soul of the Universe*). We shouldn't see God as separate from the design, or something that devised or concocted it. God *is* the design. God is the *Infinite Energy Source* for the design, the *Laws of Being and Existence*, which empowered and orchestrated the design, the *Rules and Structure of Quadrality*, which supervised and formed the design. And in our model, if one wishes to see the Designer that preexists and remains apart from the design – Nonchange prior to Change – one merely needs to look at the infinite cyclic event-line that never rotates from its vertical alignment yet can exist at any finite linear horizontal position.

While quantum probability does allow for a something-from-nothing scenario, it is best not to base substantiation for God on it. Paul Davies, a theoretical physicist on *Soul of the Universe*, says spontaneous existence as a quantum fluctuation no longer needs a creator; there would also then be pathways of evolution that God would not be able to determine. This is important because you may think my theory might be seen more as a quantum event – beginning at the appearance of infinite tangible point sources – rather than a Big Bang singularity. But probability is just as much an aspect of God as certainty, and my model for "Everything" requires both to be acknowledged and accommodated in the intersection of cyclic and linear event-lines, the point of balance in the symbolic roadmap I used to arrive at it – the ***Izunome Cross***.

David Griffin, a philosopher of religion who appeared on that program, in fact comments that to have a Big Bang you need the wherewithal for it. He also says the Big Bang could have been the continuation of a process going on for billions of years, as God worked with the somewhat recalcitrant material to get it to the point where the Big Bang could occur. This is basically what multidimensionality, and my scenario, provides. How long it takes Time to go from infinity to something countable is moot. Think of God as a general contractor overseeing the Universe's creation. Construction

begins as soon as He steps from His cyclic event-line to begin His evolution to the linear. With Him He takes all the things a general contractor needs. Foremost are the materials. You can't build anything without them. But God by our understanding is the *Infinite Source*. So, He has material covered. And in this sense He is different from a contractor separate from the construction, because He *is* that construction.

And of course to build anything you would need a schematic blueprint to follow for the various stages of construction, and an architectural design depicting the final result. In other words you need a vision and plan for the structure that encompasses the long-range goal and the intermediate steps. The long-range goal for the creation of the Universe is the completion at Planck time on the linear event-line of 4-D space-time. Short-range goals are each of the dimensional domains en route to it. And you can think of these domains as floors of a building that get added on, as well as refinements within all floors. For instance, you start with a frame, then add outer walls, inner walls, and whatever is needed to get between floors. Major systems come next, such as electrical, HVAC, plumbing, fire, and communications; finally, functional and cosmetic refinements, like paneling, fixtures, and furniture. It should be easy to visualize how this can apply to the creation in a global sense of the various dimensional domains as well as in an individual sense to anything within them.

But in addition to a vision and plan you need a set of instructions and rules to follow. These would involve the schedule according to which things get done, and the allocation of duties. Such things are site-specific – they change for each location and each job within it. Yet, you also must have access to information that applies generally, such as the building codes and proper methods of construction.

God certainly has the rules and structure in the *Rules of Quadrality* and the *Quadralitic Cube*. Moreover, they apply for everything and everywhere, but allow for things to be different in order to adapt to any specific place or time. Still, in addition to the sort of instructions and rules mentioned above, building contractors and their designers and architects need the laws that don't change, the things that they can count on. For them, these would be the laws of physics, chemistry, thermodynamics, electricity, mechanics, etc. God would also need to have those unchanging laws, and obviously He does in the *Laws of Being and Existence*.

Now, the one thing the general contractor does not usually participate in during construction is the actual work, for which subcontractors and craftspeople are hired. Yet once again God has provided for these. In a microcosmic quantum sense they appear out of Him from nowhere to become the sub-quantum particles and forces in each dimensional domain. But in a macrocosmic relativity sense it occurs in all the material bodies that interact through gravity. Individual inorganic structure on a macrocosmic 3-D scale begins in the most perfectly balanced geometric shapes – the spheres of stars and planets. Structure in organic entities then takes on forms suited to each life-function. Head, arms, legs, hands, feet, fins, wings, roots, branches, etc., are all specifically suited to allow that life form to be and do what it is meant to.

You may then question if there is a connection between the structures of the organic and the inorganic worlds. At first, none would seem apparent beyond the elemental level. But one of the most extraordinary of scientific findings in the 1990's had been in the examination of vast reaches of space the evidence of structure that looks oddly human. Astronomers refer to it as "stick man," and it is formed by the multitude of galaxies in the enormous wedge of space scientists chose to study.

What I find most remarkable in this is that "stick man" appears in the cosmos because of the perspective of the planet from which it is being viewed – one on which

human beings exist. Who can say what figure that same stretch of space might sketch out from somewhere else? And how would the observing intelligent life then base its observation on itself? Suppose intelligent life was insect. Would it find a giant grasshopper? Regardless, what the observation tells us is that structure is an inherent *condition of existence* in the Universe. And scientists now know that was the case right from the moment of the first photons appearing as the CMBR froze in space. Latest pictures show a remarkable propensity for structure without which no galaxies at all could have formed. But this is structure in its most unstructured form – assuming and changing shape as needed to maintain the system’s strength and integrity in compliance with *Dynamic Stability*. So, structure in this sense does not appear in the *Quadralitic Cube*, as neither does the thermal condition of heat from the *Triunity of Tangible Creation*. But in both cases the structure of the *Quadralitic Cube* provides the precedent, in the spirals associated with heat and in the very potential for structure at all – the purposeful material relationship of things to one another.

What this serves to help us realize is that in supplying the *Laws, Energy* and *Rules* of creation, God had provided all that was necessary from the cyclic event-line perspective. And the only *Structure* He needed was that in the *Quadralitic Cube*, that which is common to everything – the waves and spirals of light, sound and heat, and the genetic code of DNA. Everything else would have to change as an inevitability of growth and interaction. This would be following the Planck time for 4-D tangibility, but for multidimensionality even from the Zero Moment. And the plan whereby it took place would have to allow for both sides of the balance of Order and Chaos, Certainty and Probability, Nonchange and Change. We need to realize this in considering God’s role as the artist everywhere and at all moments for the creation of the *Big Picture*, which is then able to paint itself at any given place and time.

In the past, seekers have endeavored to find proof of God in the creation, under the assumption that the Creator could no longer be denied. And yet, evidence of the creation is all around us – the stuff in which scientists live and breathe every day – and it is still insufficient to establish the existence of the Creator as long as there are other options that don’t require it. This was the reason I sought my proof of God not in the creation but in its model. Provided the design for the Universe’s existence could withstand academic scrutiny, the proof would lie not in the metaphor of *Intelligent Design* but in its actual mechanics. The Designer couldn’t be denied because a design requires one by definition. *Microsoft Bookshelf* lists several definitions for *design* as a noun, such as “a graphic representation, especially a detailed plan for construction or manufacture,” “the purposeful or inventive arrangement of parts or details,” and, “a basic scheme or pattern that affects and controls function or development.” All refer to things that have to be made. In other words, they require a maker – just as a macrocosmic effect requires a cause. In fact, one definition states that directly, “something designed.” And *design* is thus different from *creation* – “the fact or state of having been caused to exist or brought into being.” Quantum theory has shown that creation doesn’t need a prior cause. Moreover, there is another definition for *design* we should pay special notice, which when considered with *divine* as its adjective is particularly revealing. This definition allows *design* to be not just a physical construct but a creative spiritual power. That is, “deliberate intention.” In other words, the Universe wasn’t just pre-designed, it was divinely intended!

But before the religious community stands and cheers, realize the truth of the design is such that all aspects of the Designer must be acknowledged, Good and Evil, Order and Chaos, Belief and Disbelief. Just as scientists need to adjust their formulas

to accommodate God, theologians will need to adjust their tenets to allow for all other versions of God. There is no getting around this. It is the only way a unified world could ever be realized. And by unified I don't mean under one belief system, but one Truth – the Truth that upholds equality between diversity and conformity in all things.

As far as the integration of its own beliefs is concerned, I must acknowledge Science as leading Religion. In fact, the two themselves seem to uphold the balance of integration and segregation. The pursuit of Science has always been for the universal physical truth – getting closer and closer to the formulas that allow for various disciplines to work together. The quest for the *theory of everything* is the ultimate example. With Religion, unfortunately, the exact opposite seems to be the case, maybe because people take their beliefs about God so personally. But as I said early in this journey, a core motivation for it was the realization that conflict between and within countries has predominantly been religiously motivated. Thus, if you want war to end, Buddhists and Christians, Jews and Muslims, all faiths are going to have to see the beauty in each other's beliefs re God rather than feel how they presently do. Of course other issues are also involved, such as greed, revenge, power, and fear. And society's "conflict consciousness" needs to be erased not just at the group level but at the individual level. But all these reflect an imbalance and misalignment with spiritual truth whereby we have placed our physical needs before God's spiritual wants – which is contrary to the *Law of Order*. Naturally, you have to start the purification of Humanity's Heart and Mind somewhere, and it may begin with enough individuals who demand a change at the highest level. But it must happen there for lasting change to occur, and then from the general it will travel to the specific. Moreover, Science will have to jump on the God-Designer bandwagon, to return to an earlier analogy, simply because the wars of Religion are being waged with the weapons of Science. And beginning about a century ago, technology started to escalate to the point that today Humanity's very existence is in jeopardy. So, if you want war to end, you will also have to turn off the supply of weapons. Militaries, and governments in general, have to understand the need to live by God's moral code. And again, from the general this must filter down to the specific. A truly civilized world cannot exist until criminal and citizen alike can no longer buy guns on the street, or see their use as a viable way to deal with life's trials. Indeed all Vice must go for the Light of Virtue to shine. Now, I am not claiming it will happen overnight. But as God did with the Universe's creation, you have to set the intention and then formulate a plan and take the necessary action. Remember, I said there is one truth for Religion *and* Science. We all have to start living like it, and understand the price we pay for failing to do so.

Throughout history, Humanity has pondered the inevitable result of its moral transgressions and then tried to integrate into its belief systems the way to explain it. For some, God took on aspects of judgment and vengeance, demanding retribution for the wages of wrongdoing. For others it became more a karmic consequence, a dispassionate matter of spiritual cause and effect. Such disparate allegories are among the things that have kept religions separate. The truth is that everything is occurring in the context of simple energetic principles, but these are more than the interplay of particles and forces. They are also the prime directors of will and conscience. Negative experiences like disease and misfortune aren't God's response to our wicked ways but opportunities for a greater realization of His Truth. And that encompasses a *Big Picture* only a very small part of which we are privileged to see.

To understand just how mysterious that Truth is, you know I have referred to God as *the Source of Infinite Energy*, enough to account for everything we see and

everything we don't. And yet I've also said the Universe began as All coming from Nothing. Does that imply God is Infinite Nothing? Yes, and God is Infinite All, too! That's what it means to exist as Unity, before any separation into Duality. Once that occurs, which side of the balance of God and Universe upholds Nothing and which upholds All is simply a matter of perspective. From the Universe's perspective at the Big Bang, the All of it had sprung from Nothing. But that is only in a Physical Realm sense – the balance of Nothing and All. From God's perspective – the balance of All and Nothing – All was His spiritual actuality and Nothing was the physical potential He had yet to achieve. He had the *Laws of Being and Existence* the process would have to follow and the *Rules and Structure of Quadrality* by which it would be accomplished. Clearly, then, our existence is a result of the key that turned the ignition of Creation – the *Principle of Behavioral Reversal*. With it, Nothing became All.

I began this summary of my work on p. 982 by describing how the model I'd discovered for creation was based on all language forms, whereby the information concerning common thoughts and experiences is conveyed. The resulting *System of Quadrality* became a solid and self-verifying logical construct as well as its graphic representation for the *Truth within the Movement* of all energy and matter. But I'm sure you'll recall my recent comment that no talk of mechanics – the physical plan – should overlook the spiritual element. You can't separate the Music from the Mathematics any more than you can the Designer from the Design. It is then when we must consider how the physical form of language as a means for conveying information and energy misses its ineffable quality – its intent – which transcends information. And intent, as I've shown, by definition is part of the Design. But of even greater importance to us is establishing how *Quadrality* is the model for both.

A simple example will demonstrate what I mean. For a moment we'll dip back into the *System of Quadrality*, but not to introduce anything new. Whatever I may have overlooked by now can wait for another time. I merely wish to use it. To do so, I want you to think of language as something that itself expresses the *Principle of Balance* by manifesting a spiritual as well as physical nature. Purely from a mathematical perspective we can explore how language exists as a way to code information. But a code generally has a one-to-one correspondence, such that there is no confusion in the decoding. That would be no problem in a language if a word only had one definition. But, throughout my work I spent time exploring how any given word could express a range of values through its definitions. And we saw with *design* just how different the shadings can be. Moreover, words often function as different parts of speech, with variations in and even new definitions to offer. Thus, the word alone is insufficient to convey information without considering its context and its use. And even with all these variations we are still within the physical realm of Mathematics. When we consider words for their meaning we enter the spiritual realm of Music. It is then when even all the variations in the definitions for a written word can't do justice to its intention. Consider all the nuances that can be conveyed in the tone or inflection of the word when it is spoken, the facial expression accompanying it, or even the hand gestures and body posture. Even a lie can be made to seem true. Only the most skilled writers can ever hope to come close to letting us read the intention between the lines of what is written without explicitly writing it.

How can the *System of Quadrality* model that? First of all, it begins by basing itself on the truth of information and energy as a range of values, and that the range covers spiritual as well as physical manifestations. To see the entire range, let's review three relevant dualities that appeared in our charts:

Symbolism (S) Meaning  
 Meaning (G) Information  
 Information (P) Energy

Each duality on its own expresses a complete and self-sufficient spiritual to physical balance. Yet, it is easy to discern a natural energetic progression from the terms in the dualities as well as the *Anchor Codes* for each duality. Start with the *Anchor Codes*. Even without the term duplication in the three dualities, their energetic evolution is clear. The first and last dualities contain the *Anchor Codes* for the *Spiritual* and *Physical Models*, and the middle has the *Code* for *Physical Model* dualities as they first appear in the Spiritual Realm through gender reversal. When combined through the *Rules of Quadrality*, the individual terms of the first and last dualities assume the most appropriate of four energetic locations within that range. But the middle duality allows us to see how the evolution from *Duality* to *Quadrality* occurs through *Triunity*. Proceed as we did on pp. 313-314 to arrive at the quadrality Happiness/Love ~ Pleasure/Wealth. I won't repeat the specifics of the derivation process; combine dualities into triunities through their common terms, and then these into the final quadrality:

$$\begin{array}{c}
 \text{Symbolism/Meaning/information} \\
 + \\
 \text{Meaning/Information/Energy} \\
 = \\
 \text{Symbolism/Meaning} \sim \text{Information/Energy}
 \end{array}$$

Of course, it is the same quadrality as would be derived from the first and last dualities through *Rule #2*, but here with the added benefit of seeing how a spiritual state of alignment connects the two physical states. Now, as to what we learn from it, quadralitically speaking, Information and Energy are insufficient to describe a complete range of values – exactly as we were able to discern upon considering the role of intent in language. Still, even with this as our complete range, where is the room in the *System of Quadrality* for the variation I earlier mentioned? First, it is found in the infinite diversity of dualities that can be combined in equations, allowing for the spiritual and physical harmonics and frequencies of all *being* and *existence* to be upheld. Next, it occurs in the intersection of horizontal and vertical axes along each of which this entire range can be expressed! In other words, at Information on the X axis the complete range from Symbolism to Energy is found along the Y axis. And the same can be said for the other three, to the extent the vertical energies are allowed at each horizontal location. And since the two axes don't have to uphold the same set of values, rather than balance a range from Spiritual to Physical you may have one that balances the range from Positive to Negative, like True to False. Then, add the Z axis and all this can evolve through each of the *Four Energy Systems!*

But the even greater spiritual lesson appears when we place our quadrality in the context of the *Spiritual Alignments* of the *Four Pathways to Light and Truth*, and ponder how their *Physical Paths* can reveal the key human ingredients in a recipe for a better world:

$$\begin{array}{c}
 \text{Symbolism/Meaning} \sim \text{Information/Energy} \\
 \text{Soul/Heart} \sim \text{Mind/Strength} \\
 \text{Care/Feel} \sim \text{Teach/Serve}
 \end{array}$$

On our journey together there were times when I got pretty technical, and I often encouraged you to bear with me, or to skip over those points that seemed difficult to understand. But in retrospect, if you look beyond the specifics and just consider the generalities, I'm sure you'll see I've provided a vision for the truth of the Universe that's simple enough, as Stephen Hawking hoped, for ordinary people to be able to sit around and discuss. You don't have to memorize the *Rules of Quadrality* to grasp how energy manifests as two ranges of values, spiritual and physical, each of which best serves their purpose. And all the rest, the *Laws of Being and Existence*, *Harmonic Creation*, *Behavioral Reversal*, are easily applicable in your daily routine once you get the feel for how they work. Indeed, the Universe didn't know any of it in advance, but through its own experiment and observation, and a desire to seek for itself the greatest good, it was able to learn and become what it is and we are today.

In conclusion, I doubt if by now there can be any misunderstanding what I've proposed in ***The Totality Of God And The Izunome Cross***, or its implications. It is more than merely acknowledging there is a single set of *Rules* and a unified *Structure* underlying all of creation, or even that they preexisted the act, but the inevitable conclusion you arrive at once you do so. They didn't pop into existence on their own! The time has come now in this, the *Age of Light*, to lift the veil to truth and adjust our eyes to see the *realm of 21<sup>st</sup> century possibility*. God is real. There is no other way to explain the beauty and precision – the Music and the Mathematics – in the result. The insights I've come to acquire through the study of the *System of Quadrality* surely have, at least for me, provided a greater comprehension of the Universe's existence, but they have also daily made me more in awe of the Divine Majesty behind it.
